

## United International University Department of Computer Science and Engineering

CSE 313: Computer Architecture

Mid Term Examination Time: 1 Hour 45 Minutes Summer 2017 Answer any 5 (five) questions out of 6 (six) questions

[2]

[3]

[3]

[4.5]

- 1. (a) Describe the major functionalities of **Instruction Set Architecture**. [2]
  - (b) Identify if an overflow has occurred for the following arithmetic operations- (Assume 5 bit architecture)
    - i) 8+9
- ii)15-(-10)
- iii)-16-5
- iv)6-12
- (c) Identify the major differences between **Stack** and **General Purpose Register**. [2]
- 2. (a) Write down MIPS code for the following C code-

if(a==b)
 a=a&5;
else if(a!=c)
 a=a<<5;
else
 a=a-5;</pre>

(b) Write down the machine encodings for the following instructions. Put down different fields like opcode, rs, etc. in separate box and show the final hexadecimal encoding.

i) srl \$8,\$9,15

ii) lw \$16, 400(\$12)

Instructions	Funct	Opcode
srl	0x000000	0x100000
lw	0x000000	0x110000

3. (a) Write down the MIPS code for the following C code-Assume base register of A is \$S6

```
while(i<j)
{
    j=i;
    while(j>0)
    {
        A[j]=A[j]+i;
        j--;
    }
    i++;
}
```

(b) Place 0x4F3BA71 in the memory by using both **Big Endian** and **Little Endian** method. [1.5] Assume your memory is byte addressable.

1

[2] 4. (a) Describe the usage of following MIPS registers during procedure calls- \$a0-\$a3, \$v0-\$v1 and \$ra [2] (b) What are the six steps taken by MIPS processor during a procedure call? (c) Write a MIPS code for a procedure that takes an input n in register \$s0 and returns the [2]value of 2 + 4 + 6 + ... + 2n(a) Draw the block diagram for hardwares used to implement **modified** multiplication algo-[2] rithm (b) What are the advantages of **modified** multiplication algorithm over **general** multiplica-[1] tion algorithm (c) Show the simulation of **general** multiplication algorithm where the multiplicand = 1001 [2]and multiplier is 101 (d) Convert the following C code into corresponding MIPS code [1] int ping(int a){ return pong(a + 1); } int pong(int b){ return b; } 6. (a) Draw the double precision representation of floating point number in MIPS [2] (b) Draw the block diagram of hardwares used for division algorithm [2][2] (c) Show the simulation of division algorithm where dividend = 1110 and divisor = 11
